

## Your healthier space checklist

To help you create a smarter, healthier space that reassures people and inspires confidence in your business, Ambius compiled best practices from hygiene and design experts worldwide to prepare the following insights as your guide.

### ✓ Is your building clean?

Viruses, bacteria, and other pathogens pose a constant, invisible threat. Go beyond clean with disinfection services to improve the surface hygiene of your premises.

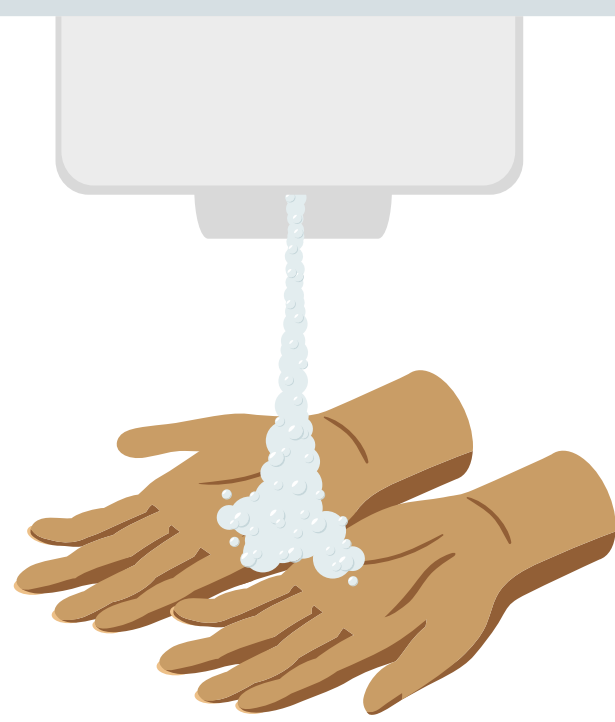

- Disinfection services ensure high levels of hygiene
- Our advanced Liquid Dispersal technology treats large spaces quickly killing germs in 10 minutes
- EPA-Approved and on List N for use against SARS-CoV-2
- Disinfects hard, non-porous surfaces and high-touch contact points

### ✓ Are your people protected?

Studies show that up to 80% of common infections can be spread through contaminated hands. Hand sanitizer services help reduce that spread while simultaneously promoting positive behaviors.

- Modular, mobile sanitizer stands create an intuitive user experience that encourages hand hygiene
- Sensor-operated units reduce product waste and deliver up to 2,000 uses per cartridge
- Our safe, gentle, dye-free foam sanitizer kills up to 99.99% of germs, viruses, and harmful bacteria
- Full-service solutions include monitoring, maintaining, cleaning and refilling units

### ✓ How is your indoor air quality?

Indoor air has already been shown to be up to 5 times more polluted than outdoor air. Now, scientists have shown that the primary way the novel coronavirus spreads is through the air. With people spending 90% of time indoors, that puts us at risk for exposure to a range of viruses, contaminants, microbes, allergens, and pollutants. Take a deep breath – air purification services can help.

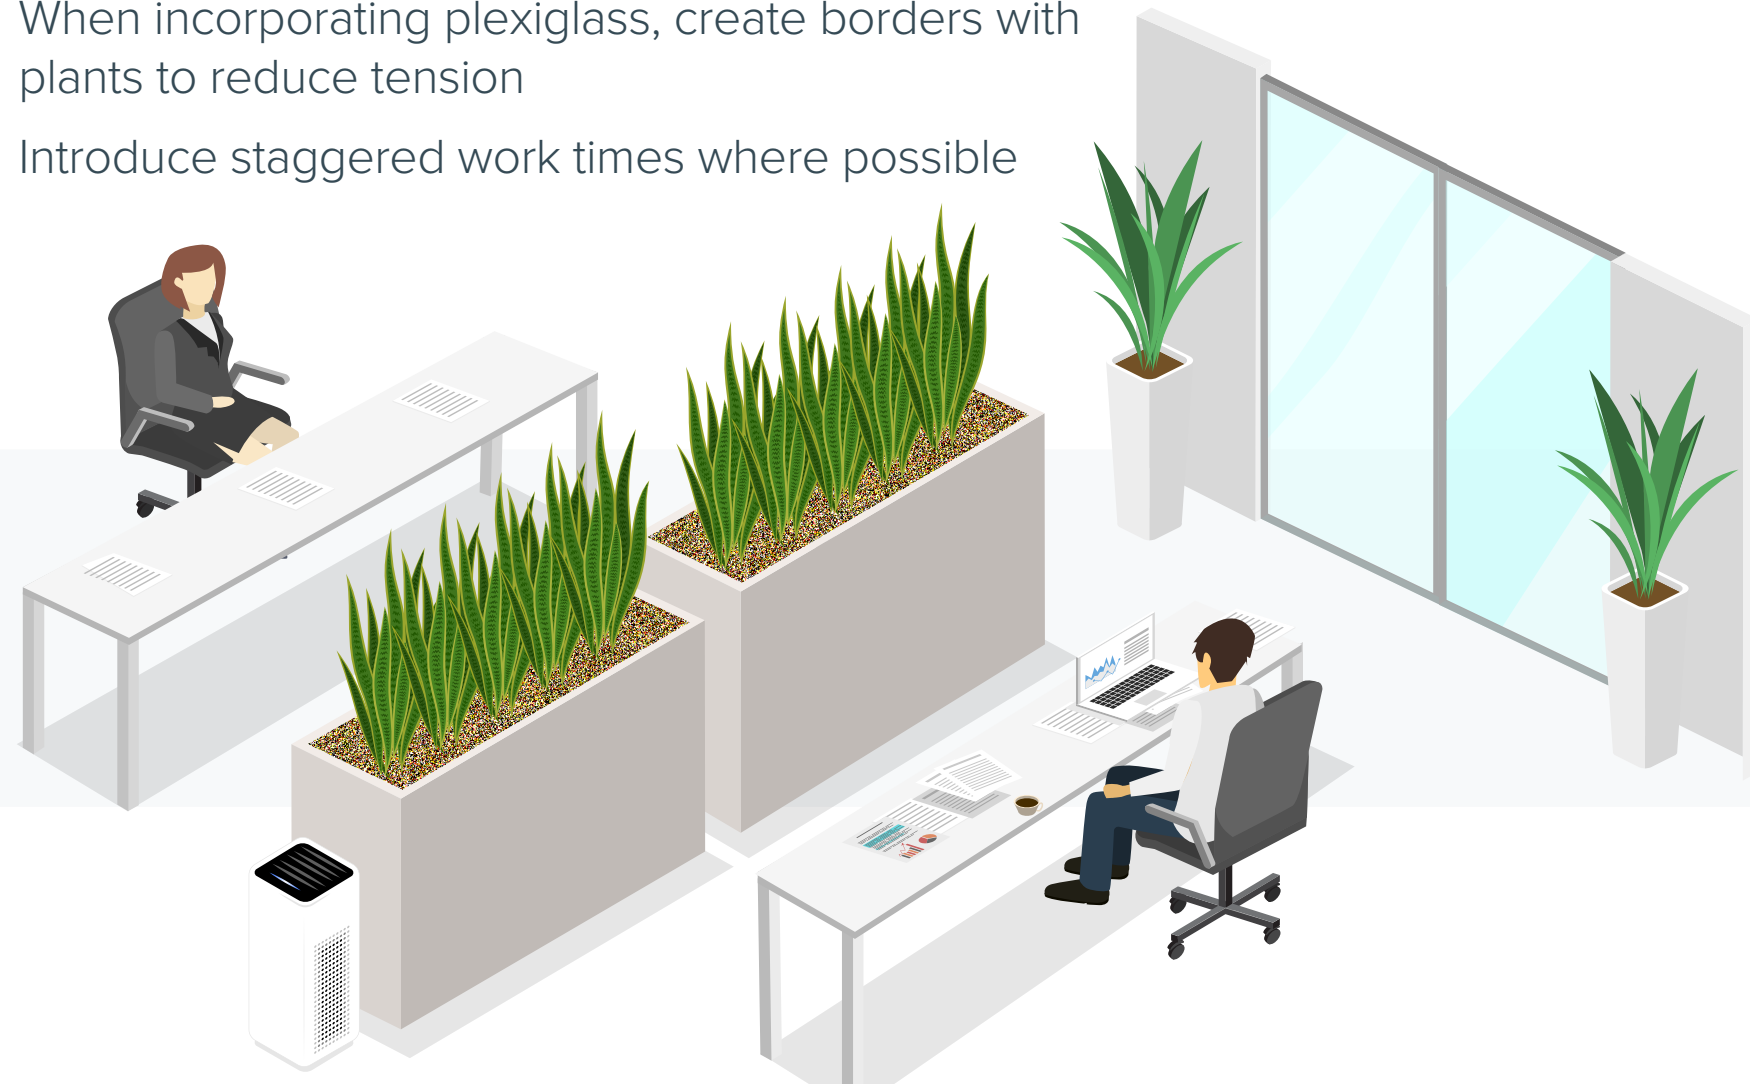

- Portable, free-standing units clean up to 700 square feet
- Our purifier's 4-Stage Filtration Process includes HEPA13 and carbon filters for a more powerful filtration of contaminated air
- Effectively remove up to 99.7% of harmful, airborne contaminants including COVID-19
- Full-service solutions keep your people and space protected with regular maintenance, cleaning, filter replacement, and disinfection

### ✓ Are you keeping your distance?

COVID-19 spreads mainly among people who are in close contact (within about 6 feet) for a prolonged period. It's important to design your space to help people maintain social distancing.

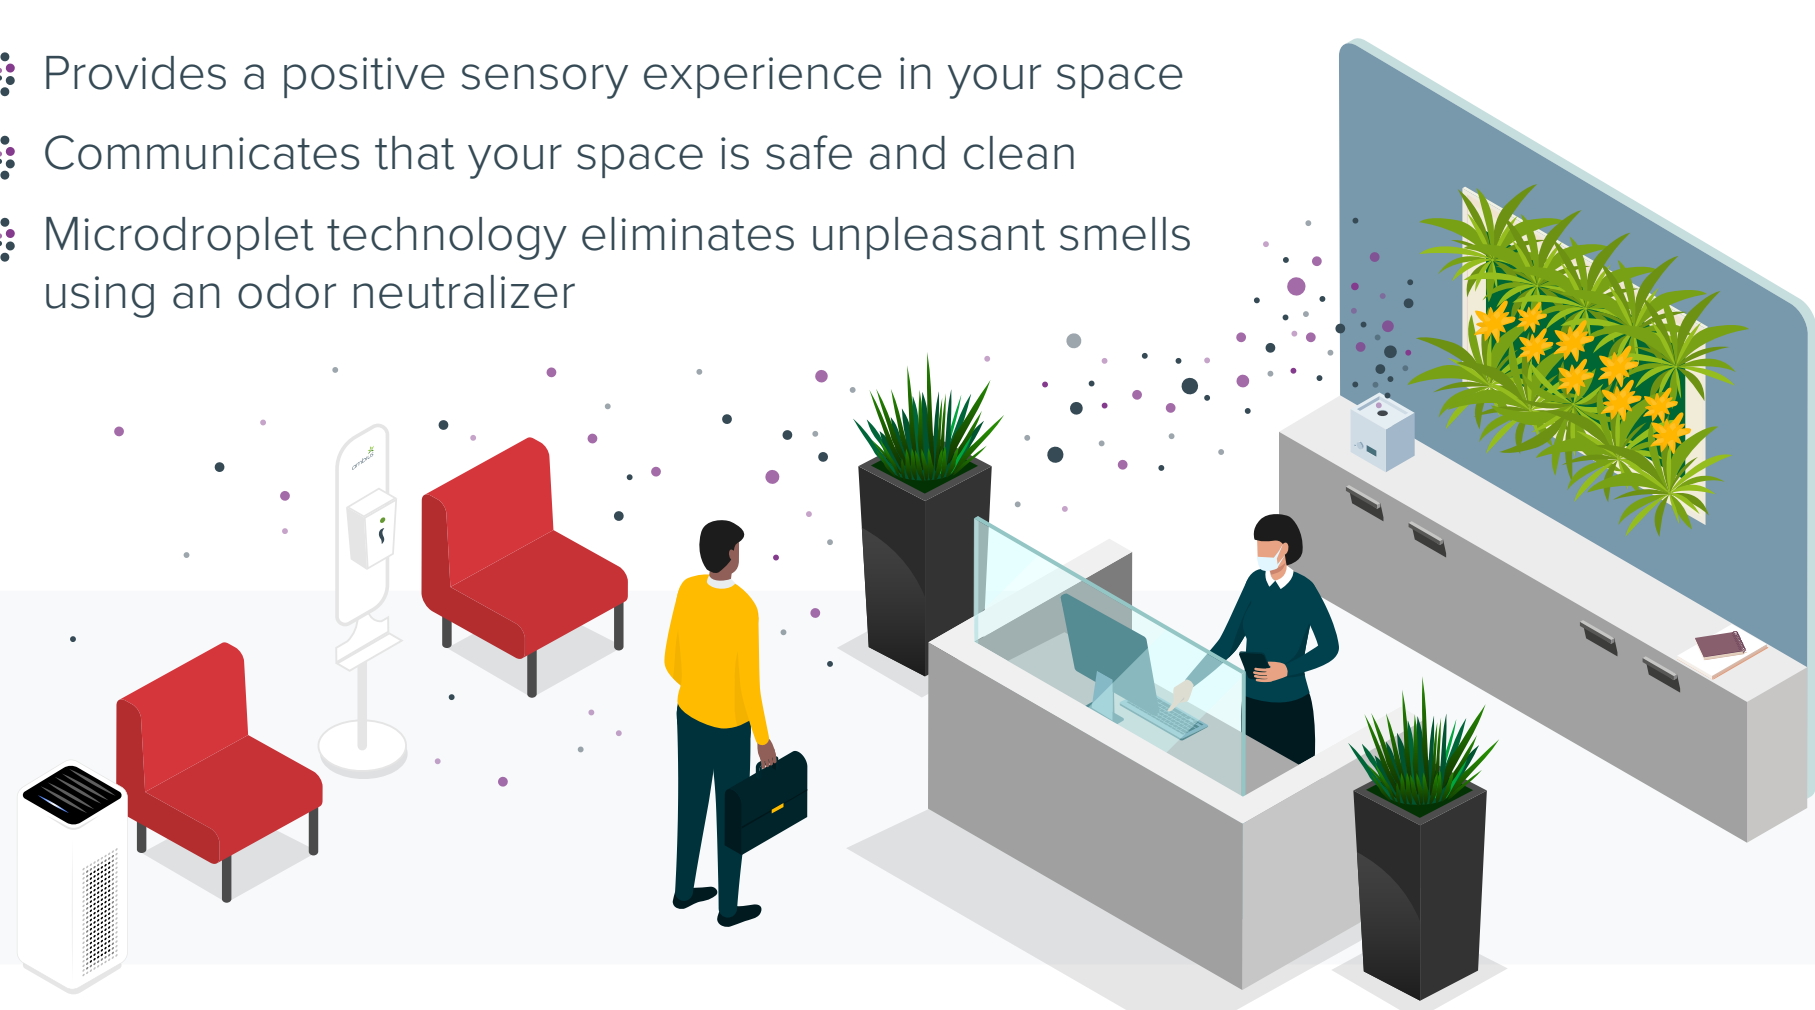

- Modular green and moss wall partitions, plants, and containers can be used for fast, functional, and beautiful space redesigns
- Create green wayfinding or directional pathways with plant barriers
- When incorporating plexiglass, create borders with plants to reduce tension
- Introduce staggered work times where possible

### ✓ Are you communicating a sense of cleanliness?

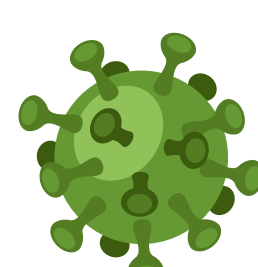

Employees and customers want to know that a space is clean and safe. Cleaning and disinfecting is only half of the battle. Adding fresh, clean scents to a space can not only impart a sense of cleanliness, but also create a warm and welcoming atmosphere.

- Provides a positive sensory experience in your space
- Communicates that your space is safe and clean
- Microdroplet technology eliminates unpleasant smells using an odor neutralizer

### ✓ Do you have a protocol check in place?

You devote time to develop best in class protocols for your business. It's important to verify that your standards are being followed and people are acting on the visual cues that build trust with employees and customers.

- ✓ Verify that your hygiene and COVID-19 protocols are in place and being consistently followed
- ✓ We conduct a detailed, on-site assessment at each location
- ✓ Review wellness policies, social distancing, touchpoints, and more
- ✓ Ensure you are in compliance with local public health guidance
